

## Crucial® BOM-controlled Server DRAM

### Server memory made easy

Doing business with us just got better. Crucial's Bill of Materials (BOM)-controlled Server DRAM product offering is available for customers who require BOM and revision control, as well as advanced notification of changes to memory modules. There's no need to worry about when new module changes are coming; we'll let you know.

### Predictability, reliability

The predictable continuity of BOM-controlled Server memory can help reduce the amount of time spent qualifying memory due to unexpected changes in memory modules. Customers who are registered for the program will receive a 30-day notification of any changes to major parts of our memory modules.

BOM-control applies to the DRAM component, register and PCB (Printed Circuit Board) of eligible Crucial server memory modules.

### The memory you need

This new offering includes our most popular DDR3-1333MHz RDIMM server memory and is available in 2GB, 4GB and 8GB densities. Validated on Intel® CPUs and platforms, these parts are halogen-free and RoHS compliant. For your convenience, detailed specification sheets, module testing, and qualification data are available upon request. Participating customers can also benefit from the various features offered by the Crucial Reliance Server Program, which supports BOM-controlled Server Memory.

### Peace of mind

Crucial Reliance is more than a name. It's peace of mind. Through the Crucial Reliance Server Program, you can rest assured that every server and workstation memory module is of highest quality—and you're backed by our world-class service. Program features include on-site spares, dedicated toll-free customer phone support and optional bulk shipping. We've got the support options your organization needs to keep things running smoothly. That's what Crucial Reliance is all about.

### FEATURES & BENEFITS:

- Crucial Reliance Server Program benefits
- Halogen free and RoHS compliant
- Crucial, part of Micron Technology
- Trusted name in server memory
- Premium quality
- Limited Lifetime Warranty

### Crucial BOM-controlled DDR3 Registered DIMMs

Crucial part number	Module Type	Module Density	Number Ranks	Comp Config	Data Rate (MT/s)	Voltage	Comp Density	Die Rev	PCB Height	# Pins	Register	Halogen Free	RoHS Compliant
